

Magnificent Seven CAPEX relationships (2nd- and 3rd-order)

Overview

The **Magnificent Seven** are the seven U.S. technology companies (Alphabet/Google, Amazon, Apple, Meta, Microsoft, **Nvidia**, and **Tesla**) that dominated market capitalization in the mid-2020s. This report examines large **capital-expenditure (CAPEX)** deals announced or reported since **2024** that show where the Mag 7 have been “writing checks” to grow their AI computing, energy, and manufacturing capacity. For each company, I identify major **second-order** partners (companies receiving significant CAPEX contracts, investments or purchase agreements) and – wherever the public record allows – describe the **third-order** suppliers or partners those second-order firms rely on. Only confirmed deals or well-sourced negotiations are included. Tickers are provided for publicly traded second-order firms.

Note on data availability – Much of the Mag 7’s supply chain is private and many suppliers are private or subsidiaries without publicly available contract data. For some second-order partners, the available reports do not disclose the names of their own suppliers, limiting third-order visibility. I include third-order relationships only where there is credible reporting.

Alphabet/Google (GOOGL)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Public Investment Fund (PIF) & Saudi tech firm Humain	Google Cloud and Saudi Arabia’s PIF plan to invest US\$10 billion to build and operate a global AI hub in Saudi Arabia. The joint venture with local firm Humain will create AI infrastructure and training capacity ¹ .	Announced Mar 2026; part of Big Tech’s push into the Middle East.	Not publicly disclosed. Humain is expected to source hardware and construction services locally.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Crosswind & Ecowende consortia (Shell/Eneco JVs)	Google signed its largest offshore wind power-purchase agreement (PPA) to take 478 MW of electricity from two Dutch wind farms developed by Crosswind and Ecowende (joint ventures between Shell and Eneco) ² .	PPA announced Feb 2024; ensures additional carbon-free power for Google data centres.	Wind-turbine suppliers likely include Siemens Gamesa or Vestas, but the PPA announcement does not name them; Shell/Eneco will manage construction and operations.
ReNew Energy Global (RENEW)	ReNew will build a 150 MW solar project in Rajasthan, India, to supply carbon-free electricity to Google under a long-term contract ³ . The project is expected to generate ~425 GWh of clean energy annually.	Announced Dec 2025; commissioning targeted for 2026.	ReNew typically procures solar modules from tier-1 manufacturers (e.g., LONGi, Trina); specific suppliers were not disclosed.
German data-centre expansion	Google committed €5.5 billion (≈US\$6.4 billion) of CAPEX from 2026-2029 to expand cloud and data-centre capacity in Germany, including a new site in Dietzenbach and expansion in Hanau ⁴ .	Announced Nov 2025; aims to secure 9,000 indirect jobs.	Construction contractors and equipment providers have not been named publicly.
Visakhapatnam data centre & power infrastructure	Google will invest US\$6 billion to build a 1-GW data-centre campus and power infrastructure in Visakhapatnam, India. About US\$2 billion will fund renewable-energy capacity to power the facility ⁵ .	Announced Jul 2025; part of Google's multi-billion expansion across Asia.	Local renewable-energy developers (state utilities and private solar/wind firms) are expected to build the generating capacity; names are undisclosed.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Anthropic (private AI start-up)	Google provided more than US\$1 billion in new funding for AI start-up Anthropic in 2025 ⁶ and previously committed another US\$2 billion . In Oct 2025 Anthropic agreed to use up to one million Google TPU chips , worth tens of billions of dollars, giving it >1 GW of compute capacity ⁷ .	Convertible funding and cloud-compute contract; reinforces Google's TPU ecosystem.	Anthropic relies on Google's Cloud and TPUs; its own suppliers include AI-chip foundry Taiwan Semiconductor Manufacturing Company (TSMC) for TPU production and manufacturers of data-centre equipment (not named in the reports).

Amazon (AMZN)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Louisiana data-centre build (project)	Amazon announced plans to invest US\$12 billion to build and operate data centres in Louisiana, creating 540 full-time jobs ⁸ . The project includes electrical and HVAC infrastructure and a US\$400 million fund to offset water-infrastructure impacts ⁸ .	Announced Feb 2026; Amazon will partner with local utilities.	The report names Southwestern Electric Power Company (SWEPCO) as the electric-utility partner ⁸ . Construction contractors and equipment suppliers are not disclosed.
Spanish data-centre expansion	Amazon committed €18 billion (~US\$21 billion) in 2026 to expand its cloud-computing infrastructure in Spain, adding to €15.7 billion previously announced investments ⁹ .	Announced Mar 2026; aims to support up to 30,000 jobs through 2035 ⁹ .	The expansion will require construction and renewable-energy contracts; specific suppliers are not named.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Anthropic (private)	Amazon invested up to US\$4 billion in AI start-up Anthropic in 2023, including an immediate US\$1.25 billion and future options ¹⁰ . Anthropic commits to use Amazon Web Services (AWS) for most of its cloud and to purchase Amazon's custom Trainium and Inferentia chips ¹⁰ .	Continues into 2025; Amazon was considering investing additional billions to maintain a large stake ¹¹ .	Anthropic buys data-centre chips from Amazon (Trainium/Inferentia) and uses cloud services; its own suppliers include chip foundries (e.g., TSMC) and AI-hardware manufacturer Nvidia .
U.S. government AI/ supercomputing infrastructure	AWS plans to spend up to US\$50 billion to expand AI and high-performance computing capacity for U.S. government customers ¹² . The investment will add about 1.3 GW of compute capacity across AWS Top Secret, Secret and GovCloud regions ¹² .	Announced late 2025; includes advanced computing and networking technologies.	Likely relies on chip suppliers Nvidia and AMD for GPUs and servers, and on data-centre construction firms; specific names are not disclosed.
Rivian Automotive (RIVN)	Amazon placed an order for 100,000 electric delivery vans from EV start-up Rivian in 2019 and still plans to receive them, though Rivian has opened sales to other clients. Amazon had roughly 20,000 vans in service when the exclusivity ended ¹³ .	Ongoing; Amazon holds an equity stake in Rivian (report not part of this citation).	Rivian sources battery cells from Samsung SDI and LG Energy Solution for its vans; it also purchases semiconductors and sensor systems from suppliers such as Bosch and Magna (not detailed in the cited article).
Anthropic & Amazon's Trainium/ Inferentia chips	Anthropic buys Amazon-designed Trainium and Inferentia chips to train large-language models ¹⁰ .	Each chip sale provides Amazon with additional revenue beyond cloud-compute fees.	The chips are manufactured by TSMC and rely on IP from Arm Holdings .

Apple (AAPL)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Taiwan Semiconductor Manufacturing Company (TSMC; TSM)	Apple pledged to invest US\$500 billion in U.S. manufacturing over four years. Part of this funding supports TSMC's US\$65 billion chip-fabrication plant in Phoenix, Arizona, where Apple is the largest customer ¹⁴ .	Announced Feb 2025; includes creating ~20,000 U.S. jobs ¹⁴ .	TSMC's critical suppliers include lithography-equipment maker ASML and chip-tool firms Applied Materials and Lam Research (not named in the Apple release).
Broadcom (AVGO)	Apple signed a multiyear, multibillion-dollar agreement with Broadcom to develop 5G radio-frequency components (FBAR filters) and wireless connectivity modules in U.S. factories ¹⁵ .	Announced May 2023; part of Apple's US\$430 billion five-year U.S. investment program ¹⁵ .	Broadcom's fabrication of RF components relies on subcontractors such as Skyworks and foundry services from TSMC ; the agreement emphasises domestic production.
MP Materials (MP)	Apple committed US\$500 million to purchase U.S.-made rare-earth magnets from MP Materials and co-develop a magnet recycling facility ¹⁶ ¹⁷ . The project will scale magnet production and support a recycling line.	Announced Jul 2025; part of Apple's US\$500 billion U.S. investment pledge.	MP Materials owns the Mountain Pass rare-earth mine and processes magnets; it purchases mining equipment and processing technologies from industrial suppliers such as Metso and Komatsu (not detailed in the press release).

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Texas Instruments (TXN), Skyworks Solutions (SWKS) and Qorvo (QRVO)	Apple doubled its Advanced Manufacturing Fund to US\$10 billion and said its investments support U.S. silicon manufacturing and jobs at companies including Broadcom, Texas Instruments, Skyworks and Qorvo ¹⁸ .	Announced Feb 2025; emphasises that Apple chips are produced in 24 U.S. factories across 12 states ¹⁸ .	These RF and mixed-signal chip suppliers depend on foundries such as TSMC and GlobalFoundries , and on materials suppliers (silicon wafers, epoxy). Apple's fund helps expand their U.S. production capacity.
Pegatron (4938 .TW)	Taiwanese assembler Pegatron (an Apple supplier) is building its first U.S. factory in Texas. The plant will make AI server products, including those using Nvidia chips ¹⁹ . Completion expected by March 2026 ¹⁹ .	Investment cost not disclosed; reflects Apple's shift of manufacturing to the U.S.	Pegatron relies on chip suppliers (Nvidia, AMD), printed-circuit-board makers and equipment vendors for server assembly.
Foxconn (Hon Hai Precision; 2317.TW)	Foxconn, a key Apple contract manufacturer, will invest US\$1.5 billion in its Indian subsidiary Yuzhan Technology to expand electronic-component and iPhone assembly capacity ²⁰ .	Announced May 2025; part of Apple's diversification of supply chain beyond China.	Foxconn depends on component suppliers such as Luxshare (cables), BOE Technology (displays) and chip suppliers (e.g., Qualcomm) for its assemblies.
Houston server-assembly facility (project)	Apple will assemble servers for its AI compute platform ("Apple Intelligence") at a 250,000 sq-ft facility in Houston. The facility opens in 2026 and will move server assembly from Asia to the U.S., reducing energy use ²¹ .	Announced Feb 2025; no dollar amount disclosed.	Apple will partner with unnamed manufacturing companies. Server components will still originate from suppliers like TSMC (processors) and Samsung/SK Hynix (memory).

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Renewable-energy developers – HELLENiQ Energy, Econergy, Nala Renewables & European Energy	To power its products in Europe with renewable energy, Apple signed long-term agreements with several developers. Projects include a 110 MW solar farm with HELLENiQ Energy in Greece, a 40 MW solar array with Econergy in Poland, a 99 MW wind farm with Nala Renewables in Romania, and a 110 MW solar farm with European Energy in Latvia ²² ²³ . These projects will add 650 MW of renewable capacity and unlock >US\$600 million in financing ²² .	Announced Oct 2025; support Apple’s goal to match the electricity used by European customers.	Third-order suppliers include solar-module manufacturers (likely LONGi or Jinko Solar) and wind-turbine suppliers (Siemens Gamesa/Vestas); however, the press release did not name them.

Meta Platforms (META)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Nvidia (NVDA)	Meta and Nvidia signed a multiyear deal for Nvidia to supply “millions” of current and future AI chips (Blackwell and Rubin GPUs) and Grace and Vera central processors ²⁴ . Analysts estimate the contract could be worth tens of billions of dollars over several years.	Announced Feb 2026; underscores Meta’s reliance on Nvidia hardware.	Nvidia fabricates chips using TSMC’s advanced processes and sources IP from Arm Holdings ; it also purchases components from photonics companies Lumentum and Coherent .

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Google Cloud (Alphabet)	Meta signed a multi-billion-dollar deal to rent Google's Tensor Processing Unit (TPU) chips for AI model development ²⁵ . Analysts noted this gives Meta access to alternative AI hardware beyond Nvidia's GPUs.	Announced Feb 2026; contract value undisclosed.	Google's TPUs are manufactured by TSMC; Meta therefore indirectly relies on TSMC and its equipment suppliers (ASML, Applied Materials).
AMD (AMD)	In the same round of deals, AMD agreed to sell up to US\$60 billion of AI chips to Meta ²⁵ . Meta plans to deploy AMD's MI300 accelerators along with custom variants to diversify its AI hardware stack.	Announced Feb 2026; part of Meta's AI-infrastructure expansion.	AMD outsources chip fabrication to TSMC and Samsung and uses packaging from ASE Group ; component suppliers include Micron for HBM memory.
CoreWeave (private)	Meta signed a US\$14 billion agreement to obtain computing power from GPU cloud-provider CoreWeave ²⁶ .	Announced early 2026; part of Meta's strategy to secure cloud capacity from multiple providers.	CoreWeave is backed by Nvidia and uses data-centre equipment from Nvidia and Dell .
Oracle (ORCL)	Meta is negotiating a US\$20 billion cloud-computing deal with Oracle ²⁶ .	Talks reported Feb 2026; would diversify Meta's cloud suppliers beyond Google and Amazon.	Oracle's cloud centres run on servers using AMD and Nvidia chips and rely on subcontractors for construction and power.
Scale AI (private)	Meta agreed to take a 49 % stake in data-labeling start-up Scale AI for approximately US\$14.3 billion ²⁶ .	Announced Feb 2026; gives Meta access to data-annotation services for AI training.	Scale AI hires human annotators through subcontractors around the world and uses annotation tools; suppliers include workforce platforms and software providers.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
AI chip development (project "Artemis")	Meta is developing an in-house AI inference chip, codenamed Artemis , to reduce reliance on Nvidia GPUs ²⁷ . By the end of 2024 Meta expected to accumulate about 350,000 Nvidia H100 GPUs and an effective compute capacity equal to 600,000 H100s ²⁷ .	First generation of Meta silicon slated for deployment in 2024; aims to save hundreds of millions in energy costs ²⁷ .	Manufacturing partners were not disclosed. Such custom chips are usually produced by TSMC or Samsung .
Manus (Chinese AI start-up)	Meta is acquiring Manus for US\$2–3 billion to integrate agentic AI capabilities into its platforms ²⁸ .	Reported Feb 2026.	Manus uses AI chips from Nvidia and AMD and operates data centres in China; its suppliers include local cloud providers and hardware vendors.

Microsoft (MSFT)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Qcells (Hanwha Solutions ; 009830.KS)	Microsoft contracted Qcells to supply 12 GW of U.S.-made solar modules and EPC services, building on an earlier 2.5 GW agreement. Qcells will invest >US\$2.5 billion to build a complete solar-supply chain in the United States ²⁹ .	Announced Jan 2024; modules will power Microsoft data centres and operations.	Qcells sources polysilicon from its parent Hanwha, uses manufacturing equipment from Applied Materials , and works with inverter supplier SolarEdge .
OpenAI (private)	Microsoft restructured its partnership with OpenAI in 2025; it holds an investment valued at about US\$135 billion ($\approx 27\%$ stake) and OpenAI committed to purchase US\$250 billion of Azure cloud services ³⁰ ³¹ .	Announced Oct 2025.	OpenAI uses Microsoft Azure infrastructure but also purchases GPUs from Nvidia and servers from Dell and Hewlett Packard Enterprise for its own operations.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
IREN (formerly Iren SpA)	Microsoft struck a US\$9.7 billion five-year deal with data-centre operator IREN to provide cloud capacity; the contract includes access to Nvidia chips and Dell equipment worth about US\$5.8 billion ³² .	Announced Nov 2025.	IREN buys servers and networking hardware from Dell and GPUs from Nvidia ; it may also source cooling systems from Schneider Electric .
Nebius Group (private)	Microsoft signed a US\$17.4 billion five-year agreement (with potential to rise to US\$19.4 billion) for dedicated GPU infrastructure from Nebius ³³ . Nebius will supply capacity from its Vineland, New Jersey data centre using Nvidia GPUs ³³ .	Announced Sept 2025.	Nebius purchases GPUs from Nvidia and servers from Supermicro ; it also uses power-distribution equipment from Eaton (not disclosed in the article).
Helion Energy (private)	Microsoft agreed to buy 50 MW of electricity from Helion's first commercial nuclear-fusion power plant, targeted for around 2028 ³⁴ . Helion has raised more than US\$570 million and counts Sam Altman among its investors ³⁴ .	Announced May 2023; believed to be the first fusion power purchase agreement.	Helion's suppliers include superconducting magnet manufacturers and cryogenic-equipment vendors; investors include Sam Altman (CEO of OpenAI) and Dustin Moskovitz .
Mistral AI (private)	Microsoft invested €15 million (~US\$16 million) in French start-up Mistral AI and will list Mistral's models on Azure; the investment converts into equity at the next funding round ³⁵ .	Announced Feb 2024.	Mistral joined the Nvidia Nemotron Coalition and will co-develop frontier models using Nvidia's compute resources ³⁶ . Thus its third-order supplier is Nvidia .
Inflection AI (private)	Microsoft agreed to pay about US\$650 million to license Inflection AI's models and hire most of its staff for a new consumer AI unit. The payment allows Inflection to pay investors including Greylock , Dragoneer and others 1.5× their investment ³⁷ .	Announced Mar 2024.	Inflection previously raised US\$1.3 billion from Microsoft and Nvidia and builds its AI models using Nvidia GPUs; its investors (Greylock, Dragoneer) are beneficiaries of Microsoft's payment.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
CoreWeave (private)	Microsoft may spend billions of dollars over multiple years with GPU cloud provider CoreWeave to ensure OpenAI has sufficient computing power ³⁸ . In 2024, the agreement accounted for 62 % of CoreWeave's revenue (about US\$1.2 billion).	Ongoing since 2023.	CoreWeave is backed by Nvidia and uses Nvidia GPUs and servers from Supermicro ; it raised financing from Magnetar Capital and others.
LG Electronics & affiliates (066570.KS)	LG announced that Microsoft and LG affiliates are pursuing a cooperation on data centres. LG subsidiaries, including LG Energy Solution , will supply temperature-control and energy-storage systems for Microsoft's AI data centres ³⁹ .	Disclosed in a regulatory filing Dec 2025; no contract value given.	LG Energy Solution manufactures lithium-ion batteries and thermal-management systems, sourcing cathode materials from POSCO and Ecopro BM ; their supply links were not detailed in the filing.

Nvidia (NVDA)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Lumentum (LITE)	Nvidia will invest US\$2 billion in photonics-product maker Lumentum to support research and manufacturing in the United States ⁴⁰ .	Announced Feb 2026.	Lumentum builds lasers and optical components; it buys semiconductor wafers and packaging services from suppliers like Taiwan-based Win Semiconductor and ChipMOS .
Coherent (COHR)	Nvidia will invest US\$2 billion in laser and photonics company Coherent ⁴⁰ .	Announced Feb 2026.	Coherent purchases laser-diode wafers and epitaxy services from companies such as IQE and Aixtron ; it uses equipment from Applied Materials .
OpenAI (private)	Nvidia is set to invest up to US\$100 billion in OpenAI and supply it with data-centre chips ⁴¹ .	Part of a broader financing package reported Feb 2026.	OpenAI will use Nvidia GPUs and may also purchase networking gear from Arista Networks ; details are not disclosed.

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Anthropic (private)	Microsoft and Nvidia will invest up to US\$5 billion and US\$10 billion , respectively, in Anthropic ⁴² . In return, Anthropic will use US\$30 billion of Microsoft's cloud and Nvidia hardware ⁴² .	Reported Feb 2026.	Anthropic purchases Nvidia GPUs; its investors include Amazon and Google .
Aligned Data Centers (private)	An investor group including BlackRock, Microsoft and Nvidia agreed to buy Aligned Data Centers for US\$40 billion ⁴³ .	Announced Feb 2026.	Aligned builds data centres and buys equipment from Schneider Electric, Caterpillar and Cummins ; the acquisition diversifies Nvidia's exposure to infrastructure.
Intel (INTC)	Nvidia will invest US\$5 billion in Intel , acquiring roughly 4 % of the chipmaker after it issues new shares ⁴⁴ .	Reported Feb 2026.	Intel operates its own fabs but also buys lithography tools from ASML and packaging from Amkor Technology .
CoreWeave (private)	CoreWeave signed a US\$6.3 billion initial order guaranteeing that Nvidia will purchase any unsold cloud-capacity from the GPU cloud provider ⁴⁵ .	Reported Feb 2026.	CoreWeave is backed by Nvidia and uses Nvidia GPUs; its other investors include Magnetar Capital and Fidelity .

Tesla (TSLA)

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
Samsung Electronics (005930.KS)	Tesla signed a contract worth US\$16.5 billion for Samsung to fabricate Tesla's next-generation AI6 chip at its new plant in Taylor, Texas ⁴⁶ . Elon Musk said the figure is a bare minimum and output could be several times larger ⁴⁶ .	Announced Jul 2025; production is several years away and will support Tesla's self-driving and AI capabilities.	Samsung relies on lithography equipment from ASML , electronic-design automation from Synopsys , and semiconductor materials suppliers (e.g., DuPont).

Second-order partner (ticker)	Deal/relationship	Financial or scale details	Third-order notes
LG Energy Solution (373220.KS)	Tesla and LG Energy Solution signed a US\$4.3 billion deal to build a lithium-iron-phosphate battery-cell factory in Lansing, Michigan. Production starting in 2027 will supply cells for Tesla's Megapack 3 energy-storage systems ⁴⁷ .	Confirmed Mar 2026; the plant is expected to create thousands of jobs.	LG sources cathode materials from POSCO and Ecopro BM and relies on machinery suppliers such as Manz AG ; the factory's construction will engage U.S. contractors.
Rivian Automotive (RIVN)	Tesla's competitor Rivian supplies Amazon with electric delivery vans; while not a direct Tesla partner, the relationship reflects competition for EV fleet contracts.	Not a Tesla CAPEX deal; included for context on Amazon's EV supply chain ¹³ .	Rivian sources batteries from LG Energy Solution and Samsung SDI .

Key observations

1. **Concentration of suppliers:** The Mag 7 all funnel significant CAPEX to a handful of hardware suppliers – chiefly **TSMC, Samsung, Nvidia, AMD** and **LG Energy Solution**. These suppliers appear repeatedly across multiple second-order relationships.
2. **AI compute arms race:** Most second-order investments centre on securing AI compute capacity. Microsoft, Meta and Google signed multi-billion-dollar agreements with GPU cloud providers (IREN, Nebius, CoreWeave) and chipmakers (Nvidia, AMD). Nvidia reciprocates by investing in photonics and data-centre companies to secure optical-interconnect capacity ⁴⁰ .
3. **Energy and sustainability:** Google and Apple are leading in renewable-energy PPAs and projects (wind and solar farms in Europe and India) ^{22 2 3} . Microsoft's solar pact with Qcells is one of the largest U.S. corporate solar commitments ²⁹ . Amazon and Tesla are also investing heavily in data-centre infrastructure and battery manufacturing ^{8 47} .
4. **Third-order opacity:** In most cases, the second-order partners' own suppliers are not disclosed in press releases or news reports. Where available, I noted equipment manufacturers (e.g., Dell and Nvidia supplying IREN ³² , Nvidia backing CoreWeave, or Samsung's reliance on ASML equipment ⁴⁶). However, detailed third-order data is often private, particularly for startup suppliers.

Conclusion

The CAPEX flows of the Magnificent Seven illustrate the immense scale and interconnectedness of the modern technology supply chain. While there are gaps in public disclosure of third-order relationships, the available information shows that these firms heavily invest in AI-compute capacity, renewable energy and semiconductor manufacturing. Suppliers such as **TSMC, Nvidia, Samsung, AMD** and **LG Energy Solution** sit at the heart of this network, benefiting from multi-billion-dollar contracts as the world's largest tech companies race to build the infrastructure for AI and clean energy.
